Eco-museum in a park

POLITECNICO DI MILANO

Students: Roberta Cassi, Laura Margherini, Sonia Tosetti

Professor: Prof. Roberto Spagnolo

The project is situated within the Park Adda Nord, a weak area from the landscape point of view, subject to historical presences like the nineteenth-century bridge and modern alterations like Italcementi tower.

The project starts from the study of the site form, reinterpreting the existing tracks, with the aim to enhance and integrate them into the new eco-museum.

The project involves the construction of a central body that raises directly from the ground level and features a small guest house that overlooks the river Adda through a natural terrace. To the right of this a library and a conference room on the left. A basement level museum, with a window overlooking on the Adda river.
